Education

SRM Institute of Science and Technology — Chennai, Tamil Nadu
Bachelor of Technology in Computer Science and Engineering — *Expected Graduation: May 2027*
Specialization: Cloud Computing — **CGPA:** 8.56/10

Technical Skills

Programming Languages: Python, Java, SQL, JavaScript
Data Engineering: Apache Kafka, Apache Airflow, PySpark
Cloud & DevOps: Docker, Kubernetes, GitHub Actions
Data & Analytics: MySQL, Power BI, Prometheus, Grafana
AWS Cloud Services: Lambda, API Gateway, Cognito, DynamoDB, Amazon S3, CloudFront, IAM, CloudWatch, Athena
Developer Tools: Git, GitHub, Terraform, VS Code

Technical Projects

MovieHub | *AWS Cloud-Native Serverless Application* 2026

- **Technologies:** AWS Lambda, API Gateway, Cognito, DynamoDB, Amazon S3, CloudFront, IAM, CloudWatch, Terraform
- Designed and deployed a cloud-native serverless application on AWS using API Gateway, Lambda, DynamoDB, Amazon S3, and CloudFront to build a scalable movie discovery platform.
- Implemented secure authentication and authorization using Amazon Cognito with OAuth 2.0, OpenID Connect (OIDC), JWT-based authentication, and least-privilege IAM policies.
- Integrated the TMDB API to deliver movie search and personalized watchlist functionality through RESTful APIs; provisioned infrastructure using Terraform and monitored application health using CloudWatch.

CareerCompass | *Placement Analytics & Management Platform* 2026

- **Technologies:** MySQL, SQL, Power BI, Git/GitHub
- Designed and developed a normalized relational database to manage placement workflows, coding progress, technical projects, mock assessments, and company applications.
- Developed 200+ SQL queries using joins, views, subqueries, window functions, transactions, indexing, and analytical reporting; built Power BI dashboards for placement readiness, coding performance, project tracking, and recruitment trends.

ClimatePulse | *Climate Data Engineering & Analytics Platform* 2026

- **Technologies:** Python, Apache Kafka, Apache Airflow, PySpark, Amazon S3, Athena, Docker, Kubernetes, GitHub Actions, Prometheus, Grafana, Power BI
- Built an end-to-end climate data engineering pipeline ingesting weather and air-quality data across **31 locations in India** using Python and Open-Meteo APIs.
- Orchestrated a **12-task Apache Airflow DAG** covering ingestion, Kafka streaming, storage, cleaning, transformation, and analytics; developed PySpark ETL pipelines to generate daily climate analytics.
- Stored optimized **Parquet datasets in Amazon S3** and queried them through Amazon Athena; containerized pipeline components with Docker and Kubernetes and implemented GitHub Actions CI/CD workflows.
- Integrated Prometheus and Grafana for pipeline monitoring and built Power BI dashboards for AQI, PM2.5, temperature, precipitation, and location-level climate analysis.

Professional Certifications

AWS Certified Cloud Practitioner (CLF-C02) — Amazon Web Services
GitHub Copilot Certification — GitHub
